

SUSTAINABILITY IN LARGE FORMAT PRINT WITH CANON

Helping you cut your emissions, use your resources smartly, and make your business more responsible.

Canon

At Canon, we're on a journey to make our entire business more sustainable. Underlying that is our corporate philosophy of Kyosei – living and working together for the common good. By improving efficiency, using resources responsibly, and minimising waste, we're reducing our impact on the planet.

Whether you're creating detailed CAD drawings or eye-catching posters, our large format printers such as the imagePROGRAF range help you reduce carbon emissions, improve resource efficiency and increase your social responsibility.

OUR THREE SUSTAINABILITY PILLARS:

Carbon Reduction

We save energy through efficient manufacturing processes that deliver energy-efficient products.

We're working hard to achieve our ambitious CO₂ reduction targets of 3% per year. Beyond that, we are working toward net zero CO₂ emissions across all our business activities by 2050.

Resource Efficiency

We conserve resources from product development through to end of life.

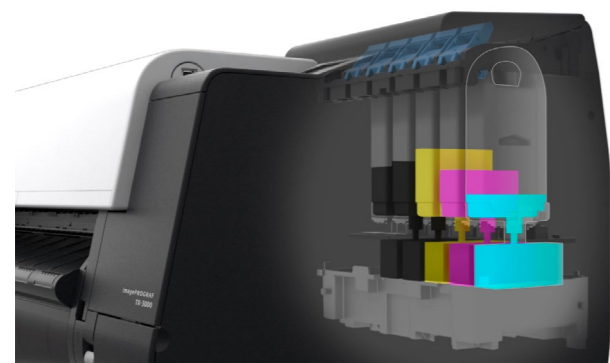

Since 2008, we have taken 44,343 tons of plastics from used produces for recycling as raw materials, and another 35,216 tones of products and parts were reused directly.

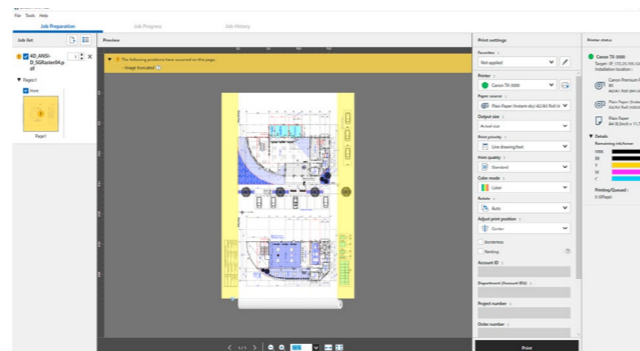

Responsible Business

We treat our employees, partners and customers with respect. Always.

Canon has been recognised with the EcoVadis Gold Rating for its sustainability efforts for seven consecutive years, which places us within the top 3% of companies globally.

Sub-ink tanks allows continuous printing during ink tank replacement

Direct Print Plus interface to minimise misprints

EPS-free packaging for TM series

CARBON REDUCTION

The imagePROGRAF TC and TM series¹ secured an EPEAT (Electronic Product Environmental Assessment Tool) Gold² rating for their low energy consumption, meeting stringent criteria set by the Green Electronics Council.

EPEAT RATED

For their relatively lower energy consumption and more sustainable packaging and consumables, meeting stringent criteria set by the Green Electronics Council.

All other imagePROGRAF devices are rated EPEAT Silver², with a large reduction in energy use versus the older models.

CLIMATE PARTNER CERTIFIED ZERO PAPERS FOR LARGE FORMAT PRINT

Supported by wider paper industry initiatives, we offer Climate Partner certified Zero large format papers to help businesses meet their sustainability goals. Red Label Zero Forest Stewardship Council (FSC)[®] and Recycled White Zero FSC[®] are the first cradle-to-customer carbon neutralised, technical wide format papers for the Architectural, Engineering, Construction and Manufacturing (AEC&M) industries.

RESOURCE EFFICIENCY

EXCELLENCE UNTIL THE LAST DROP

When you pay for ink, you own every drop. Our imagePROGRAF printers³ can run their ink tanks until they're 100% empty, with no wasted ink residues. Their hot swap ink tanks, including a reserve sub-ink tank, let you print continuously even during ink tank replacement, saving energy and maintaining productivity.

MINIMISE MISPRINTS

Our large format print software suite – Direct Print Plus, Professional Print & Layout, and Free Layout Plus – helps avoid misprints and wasted ink and media, with accurate print previews and layout tools for right first time results.

REDUCED INK CONSUMPTION

With the launch of of LUCIA TD ink for imagePROGRAF TZ/TX/TM/TA series, we've cut ink consumption significantly compared to older models. As of August 2023, it's already saved the equivalent of around 386,190 ink tanks, based on 130ml tanks. Using genuine ink means your print heads and other consumables last even longer as well, while the ink cartridges are easier to recycle.

EPS-FREE PACKAGING

Sustainability starts before you've even turned on your new printer. We've reduced polystyrene foam & printed paper materials for the imagePROGRAF TC-20's packaging, and for our new TM series, we've eliminated expanded polystyrene foam altogether – an industry first use of EPS-free packaging in large format print.

RESPONSIBLE BUSINESS

NON-TOXIC INKS

All inks used in our imagePROGRAF range, including our popular LUCIA PRO/TD ink, are non-toxic. They're water based rather than solvent based, so they're less harmful to the environment during printing – and in case of spills.

WHISPER QUIET OPERATION

The new imagePROGRAF TM series runs quietly as well – at just 39dB or 41dB depending on the model – making it ideal for noise-sensitive environments such as educational institutions or quiet offices.

¹TM series launched October 2023.

²EPEAT Gold and EPEAT Silver registered in the U.S.

³Except the imagePROGRAF TC series.
